

TESTED, TRIED AND TRUE

STATE OF THE ART DYNAMOMETER ENGINE TESTING SERVICES

When it comes to high horsepower engines, thorough testing is a critical but often overlooked part of a long, trouble free service life. For more than a decade B&G Machine customers have enjoyed the knowledge that every B&G re-manufactured engine has been tested top to bottom at one of the most advanced testing facilities in the industry. Now B&G Machine is proud to offer this same state-of-the-art engine testing service.

B&G Machine Engine Testing Services offer:

- State-of-the-art dynamometer testing facilities
- Capacity to 4200HP, 14,000 ft-lbs of torque
- Verify Horsepower, Torque, and all critical engine performance parameters
- Identify trouble spots such as leaks and injector issues
- Complete Digital printout data log of engine's actual performance

Located in Seattle, B&G invites customers to drop by for a tour or our dedicated re-build facilities, to speak with our team of certified CAT technicians, and see the dynamometer testing unit in operation.

SPECIAL INTRODUCTORY OFFER:

We will create a custom dyno report to include the parameters you want to see—Turbo boost, horsepower, torque, oil pressure, critical temperatures, injector cutout testing—you name it. B&G will also confirm engine balance data associated with vibrational fatigue—**at no additional charge.**

**Hurry! This is a time-limited offer. Call:
